Read and conform
safety instructions
before use*

Description

Dear customer

We would like to congratulate you on your new mobile high pressure cleaner and to thank you for the purchase.

To ease your introduction to the use of the cleaner, we have provided the following pages of explanations, tips and hints, which we ask you to read before using for the first time.

The equipment will assist you professionally in all cleaning tasks, e.g.:

- facades - vehicles of all types - barrels and containers
- flagstones - sheds - channels
- terraces - machines etc. - Streets etc.

Technical data	B 170 T	B 200 T	B 240 T	B 270 T	B 230 T Spec. appliance
Operating pressure, steplessly adjustable	10 - 150 bar	10 - 165 bar	10 - 220 bar	10 - 250 bar	10 - 200 bar

Description

Construction

The KRÄNZLE B170 T + B200 T + B230 T+ B240 T + B270 T - high pressure cleaners are mobile machines. The design can be seen from the diagram.

Item

- | | |
|--|--|
| 1 Water inlet connection with filter | 5 Unloader valve - safety valve |
| 2 Suction hose with filter (special accessory) Order no. 15.038 3 | 6 High pressure hose |
| 3 High pressure pump | 7 Spray gun |
| 4 Press. gauge with glycerin filling | 8 Interchangeable lance with high pressure nozzle |

Description

Water and Cleaning / Pflegemittel System

Water can be connected at mains pressure to the high pressure pump or it can be sucked directly from a storage tank. The water is then forced under pressure by the high pressure pump to the lance. The high pressure jet is formed by the nozzle at the end of the lance.

Detergent and caring agents can be added through a high pressure injector (special accessory). Up to max 20m HP hose length.

The rules concerning the environment, refuse and ground water protection must be complied with! (Information to be obtained from environmental dept, town works, etc.)

Lance with trigger gun

The machine can only be operated when the safety trigger is squeezed. The machine can only be operated when the safety trigger is squeezed.

When the lever is squeezed, the spray gun opens. The liquid is then pumped to the nozzle. The spray pressure increases and quickly reaches the selected operating pressure.

When the trigger is released, the trigger gun closes and any further spraying of liquid from the lance is stopped.

The increase in pressure when the trigger gun is closed causes the unloader valve-safety valve to open. The pump remains switched on and continues to pump liquid through the pump at reduced pressure. When the trigger gun is opened, the unloader valve - safety valve closes and the pump resumes pressure spraying from the lance

The trigger gun is a safety device. Repairs should only be performed by qualified persons. Should replacement parts be required, use only components authorized by the manufacturer.

Unloader valve - safety valve

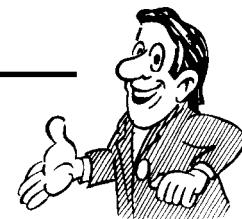

The unloader valve - safety valve protects the machine from a build up of excess pressure, and is designed not to permit an excess pressure to be selected for operation. The limit nut on the handle is sealed with a spray coating.

The operating pressure and spray rate can be steplessly adjusted by turning the handle.

Replacements, repairs, new adjustments and sealing should only be performed by qualified persons.

Description

For the motor follow the Honda operating manual only.

Motor-safety: (see Honda operating manual)

Honda motors are safe and reliable if they are operated correctly. Read the operating manual carefully before using the motor and try to understand the contents of the manual completely.

Not following this advice could lead to injuries or damage of the equipment.

To avoid a possible fire hazard and to ensure the necessary ventilation the motor has to be operated at a distance of at least 1 m from buildings and objects. Inflammable objects have to be kept away from the surrounding area of the motor.

Children and pets have to be kept away from the motor, as there is a danger of suffering burns from hot motor parts and to be injured by equipment driven by the motor.

Get to know the motor and especially learn how to switch it off quickly. Do not allow persons to operate the motor who are not familiar with it.

Setting up: Location

Neither set up and operate the machine in rooms where there is a risk of fire or explosion nor put it into puddles. Do not use the machine under water.

Do NOT !! tilt or turn round the high-pressure cleaner during transport or operation for longer than 1 minute!

CAUTION !

Never use liquid containing solvents such as paint thinners, petrol, oil or similar liquid matter. Pay attention to the instructions of the manufacturers of the cleaning agents. The seals in the machine are not resistant to solvents. The spray of solvents is inflammable, explosive and poisonous.

CAUTION !

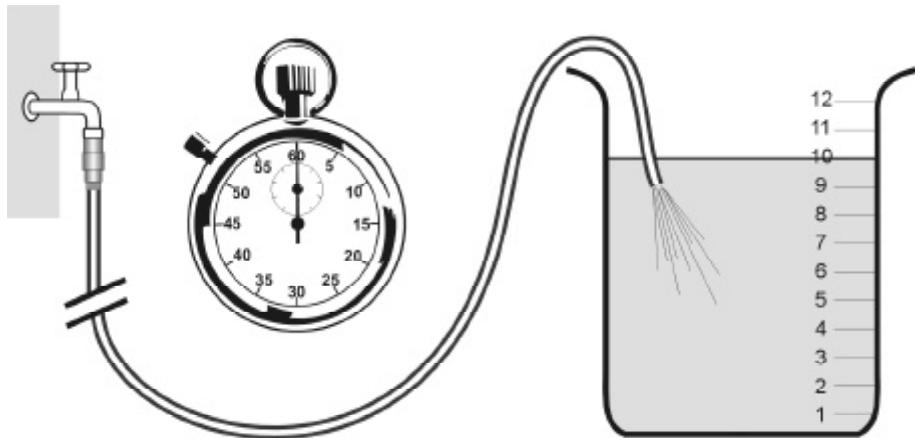

When running your high pressure cleaner with hot water of 70° C (with B230 T 50°) raised temperatures occur.
Do not touch the machine without safety gloves.

Description

Water connection:

Please check that the high pressure cleaner has available the quantity of water specified on page 2 (techn. specs.) (Litres per minute).

Test:

Allow the water supply hose to run for 1 minute into a bucket.

The received quantity of water must be at least the quantity given on page 2 !!!

Lack of water causes fast wear on seals (no warranty)

Brake

The high-pressure cleaner is fitted with a brake that prevents the machine from rolling away on uneven ground.

Always apply the brakes firmly when working with the machine !!!

Description

Brief operating instructions

1. Connect the high pressure hose with spray gun and machine.
2. Connect the suitable water supply.
3. Flush the air from the pump (open and close the spray gun several times).
4. Switch on the motor while the spray gun is open and commence cleaning.
5. After completing the work, completely empty the pump (switch the motor on for approximately 20 seconds without the suction and pressure hose).

- Only use clean water ! Protect from frost !
- Do NOT !! tilt or turn round the high-pressure cleaner during transport

CAUTION !

Please pay attention to the regulations of your waterworks company.

In accordance with DIN 1988, the machine may not be directly connected to the public drinking water supply lines.

A brief connection however is permissible according to DVGW (German Association for Gas and Water Affairs) if a tube ventilator with check valve (KRÄNZLE Order-No. 41.016 4) is built into the water supply.

Also indirect connection to the public drinking water supply lines is permissible by way of free emission in accordance with DIN 1988, part 4; e.g. by using a reservoir with a float valve.

Direct connection to a non-drinking water supply line is permissible.

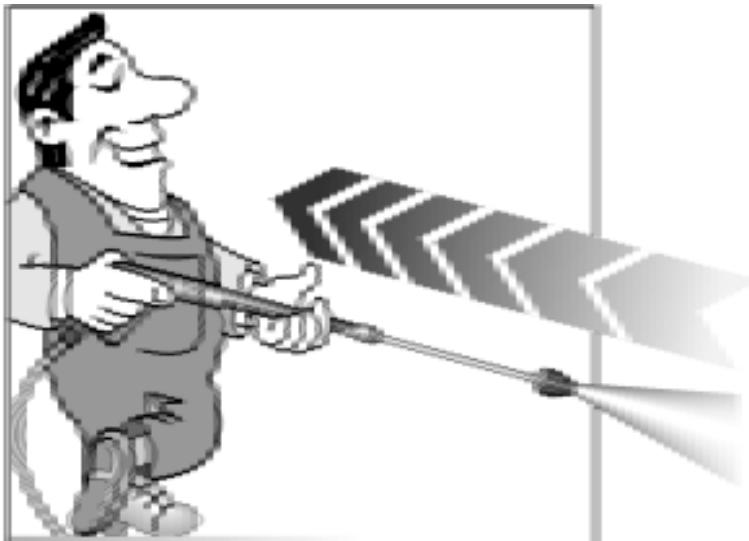

High pressure hose and spray device

The high pressure hose and spray device supplied with the machine are made of high grade material, they are also optimized for the machine and marked as required by the appropriate regulations.

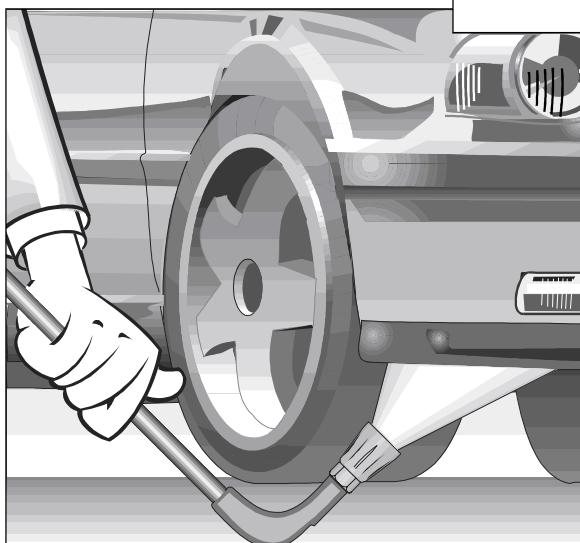

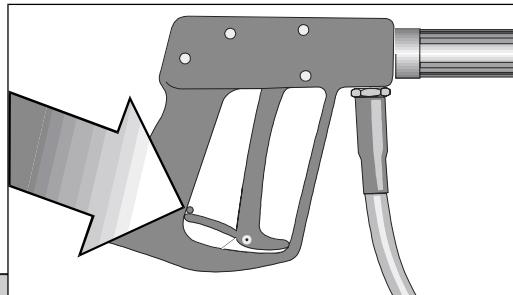

If replacement parts are required, only such parts that are authorized by the manufacturer and which bear the markings required by the appropriate regulations may be used. The high pressure hose and spray device must be connected in a pressure-tight manner. The high pressure hose may not be driven over, pulled excessively, or twisted. The hose may under no circumstances be pulled over sharp edges, since otherwise the guarantee is automatically void.

Safety notes

As to the recoil
- see notice on
page 2!

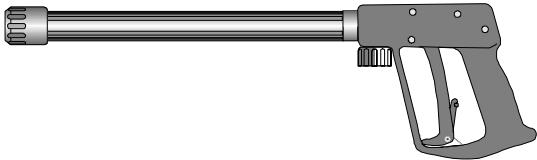

Apply the safety catch on the spray gun after each use, in order to prevent unintentional spraying!

Always aim the underbody lance. Note when using an angled underbody lance, like for example lance No. 41075, that there is a certain amount of torque in the recoil. (See also notice on page 2)

This is what you've purchased:

1. Spray gun with insulated
pistol grip and screw
connection

2. Spray lance with high pressure
nozzle, flat spray

3. Turbokiller

4. KRÄNZLE - high-pressure cleaners

B 170 T

B 200 T

B 240 T

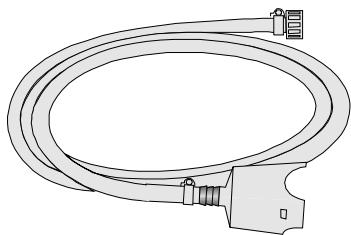

B 270 T

B 230 T

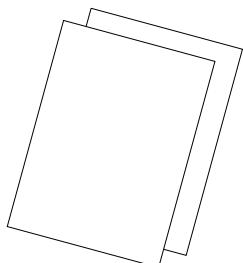

incl. hose drum with 20 m HP-hose

6. Suction hose

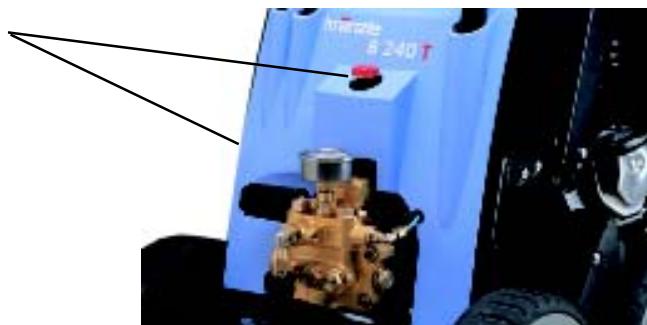

7. Operation manual pump
Operation manual motor

8. Water filter

Preparation for use

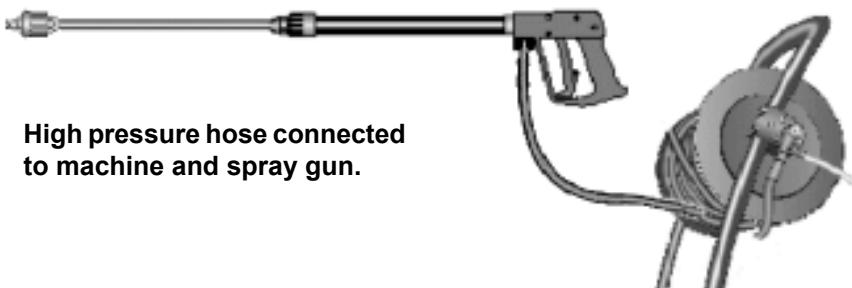

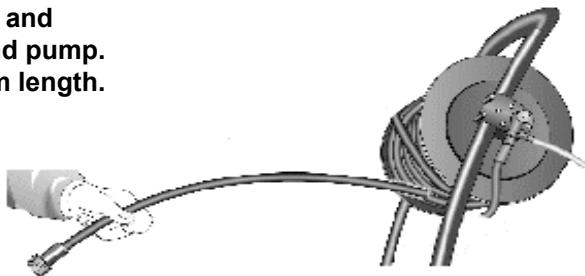

- 1. Check oil level
(Pump and motor)**

- 2. Connect high pressure lance or
Turbokiller to the spray gun.**

- 3. Unroll hose without kinks and
connect with handgun and pump.
Use HP hose of max. 20 m length.**

**High pressure hose connected
to machine and spray gun.**

Preparation for use

4. The machine can be connected to a pressurised water line with cold or up to 70 °C hot water (see page 2). Ensure that the water supply is clean when sucking from external sources. The hose cross section must be at least 1/2" = 12.7 mm (free passage). Filter must always be clean.

Please make sure that the filter is clean before using your high pressure cleaner.

Adjusting the pressure

This is accomplished by turning the handwheel.
The default setting is maximum pressure.

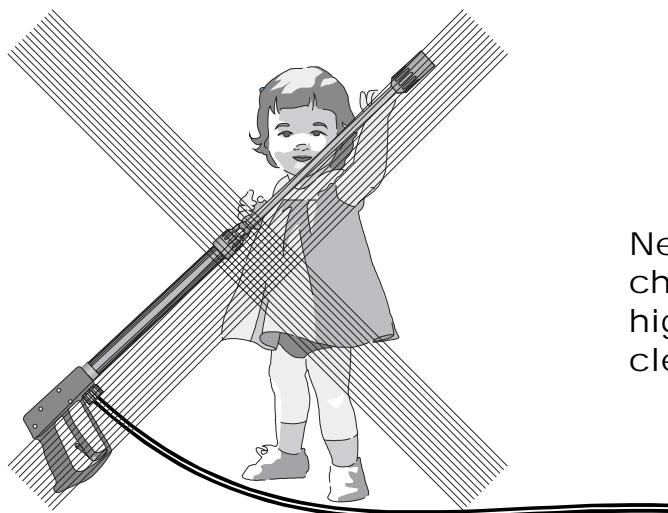

5. Maximum induction height 2.5 m - see technical data on page 2.

To shut down the pump:

1. Switch off the machine
2. Cut off the water supply
3. Open the spray gun briefly until the pressure is released
4. Apply the safety catch on the spray gun
5. Remove the water hose and high pressure hose
6. Drain the pump: switch on the motor for approx. 20 seconds
7. Winter: store the pump in rooms above 0° C
8. Clean the water filter

This is prohibited !

Never allow
children to use the
high pressure
cleaner !

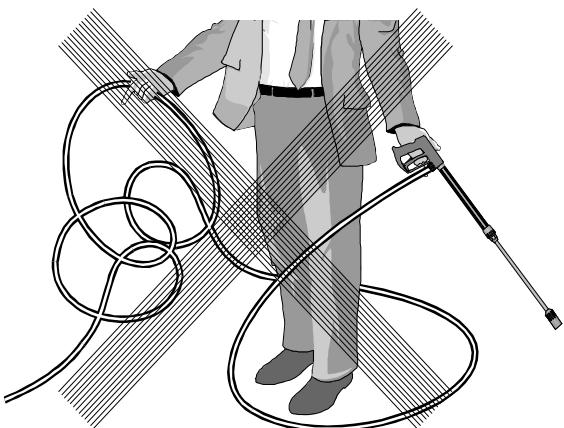

Never direct the water jet at the
machine itself !

This is prohibited !

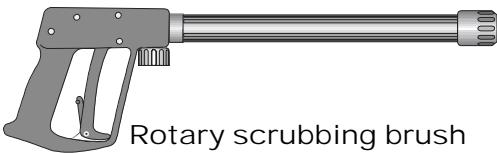

Never direct the
water jet at people
or animals !

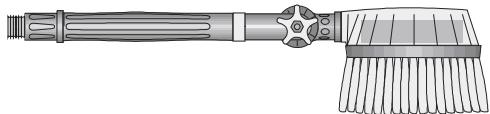

Never pull the high
pressure hose if it
has formed kinks or
"nooses"!
Never pull the hose
over sharp edges !

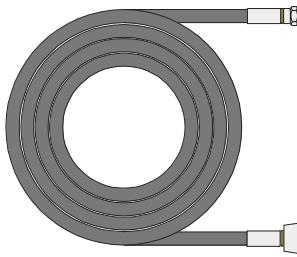

Additional KRÄNZLE-accessories for ...

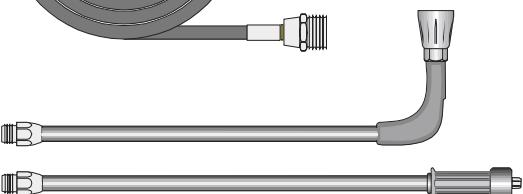

Rotary scrubbing brush
Order No. 41.050 1

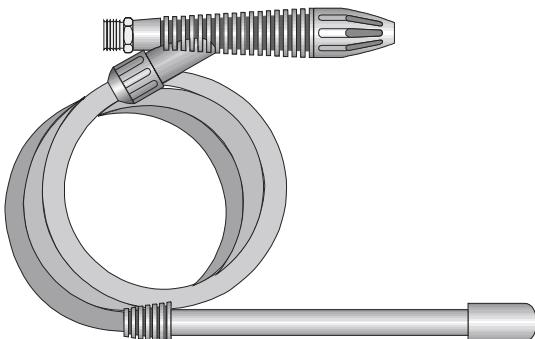

Drain and pipe cleaning
hose
8 m - Order No. 41.051
15 m - Order No. 41.058

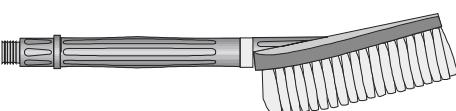

Underbody lance
Order No. 41.075

Sandblaster
Order No. 41.068 1

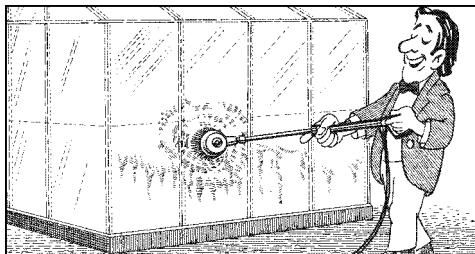

Flat brush
Order No. 41.073

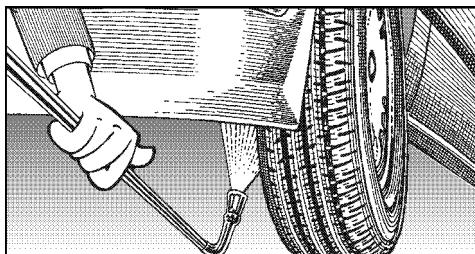

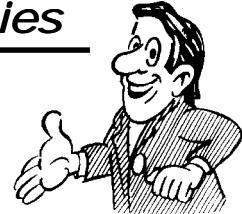

Environmental, refuse disposal and water protection regulations must be observed when using the accessories!

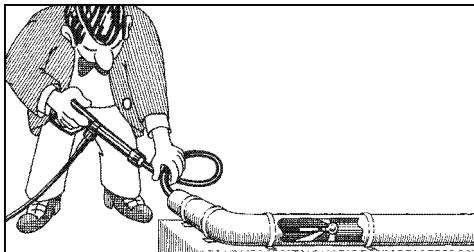

... further combination possibilities

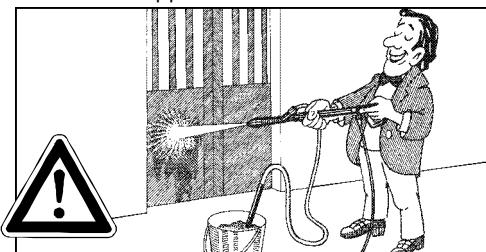

Car cleaning, glass, caravan, boat etc.
rotary washing brush with 40 cm extension and ST 30 nipple M 22 x 1,5

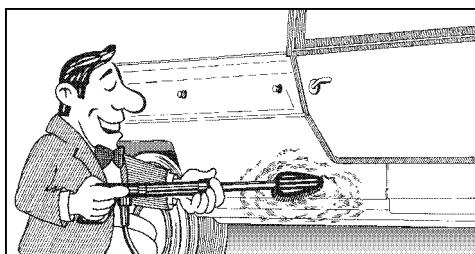

Underbody cleaning of cars, trailers and equipment: lance 90 cm with high pressure nozzle and ST 30 nipple M 22 x 1,5.
The lance must be aimed when spraying.

Cleaning pipes, channels and drains:
pipe cleaning hose with KN nozzle
and ST 30 nipple M 22 x 1,5

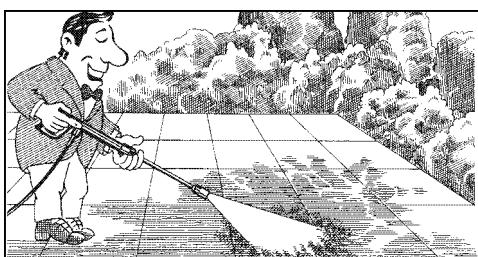

Blasting old paint, rust and facades: sand-blasting injector with suction lance, 3 m PVC hose and ST 30 nipple.

Cleaning cars and all smooth surfaces :
brush with ST 30 nipple M 22 x 1,5.

When sandblasting you must wear protection clothes! Pay attention to the instructions of the manufacturer of the abrasive!

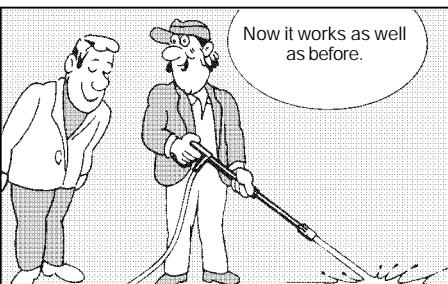

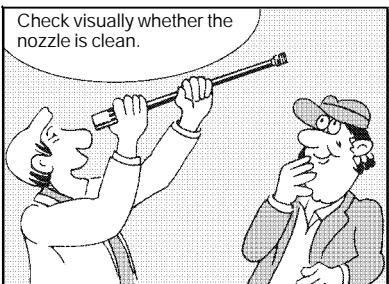

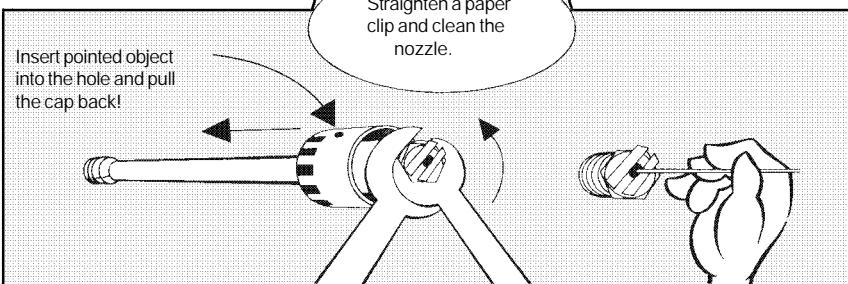

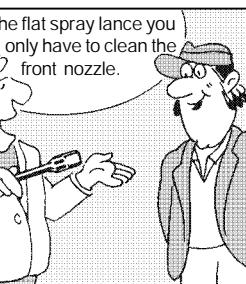

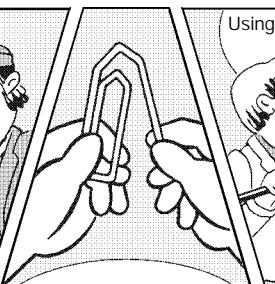

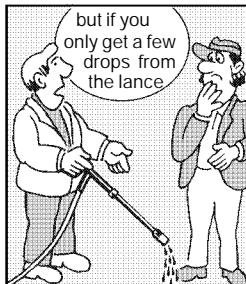

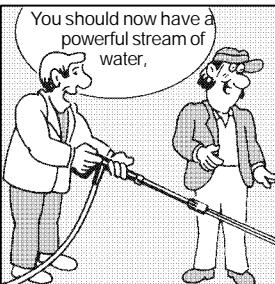

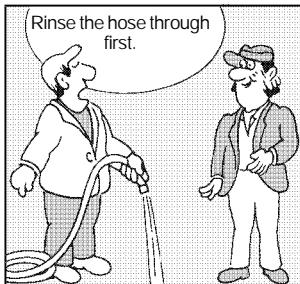

Rotary point sprayer for extreme soiling.
Dirtkiller with 40 cm extension and ST 30 nipple M 22 x 1,5.

Small repairs -

The nozzle is blocked!

- No water but the gauge shows full pressure !

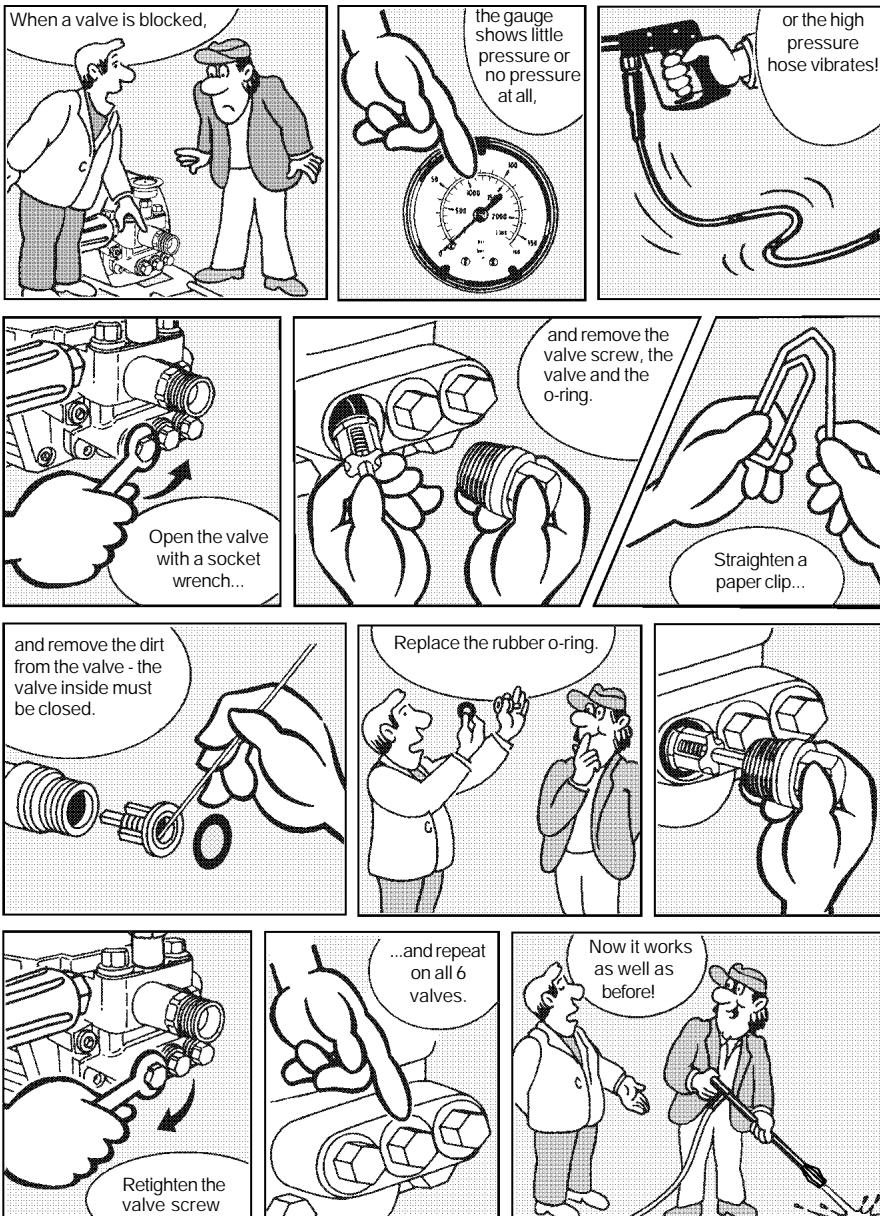

Nozzle dirty or sticky!

- Pressure gauge does not show full pressure.
- Water comes out in spurts.
- If you do not use the high-pressure cleaner for some time the valves can stick

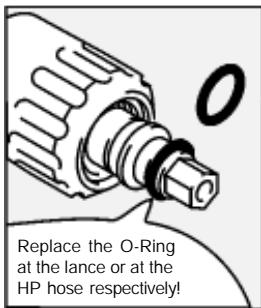

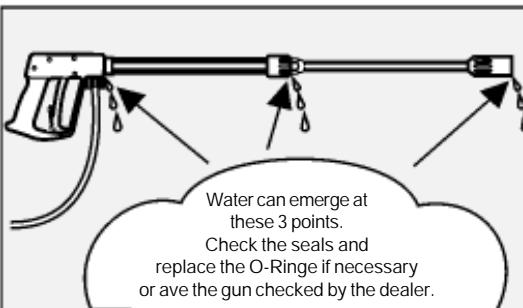

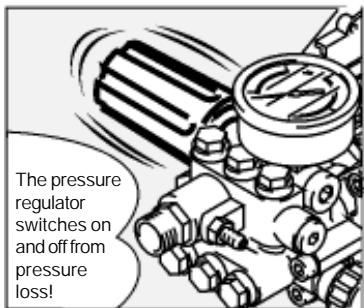

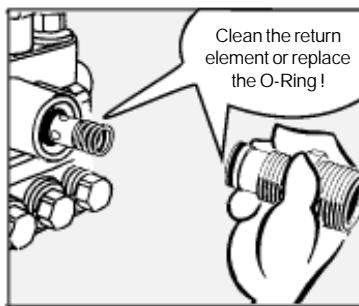

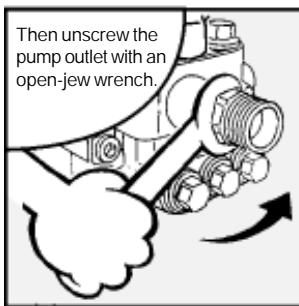

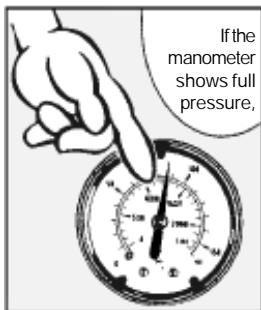

- The high-pressure hose vibrates.

Small repairs - Do it yourself!

Stopping leaks from hose or gun

- After closing the gun the manometer shows full pressure !
- The pressure regulator switches on and off continuously!

General rules

Inspections:

The machine must be inspected according to the "Guidelines for Liquid Spray Devices" at least once every 12 months by a qualified person, to ensure that continued safe operation is guaranteed. The results of the inspection are to be recorded in writing. This may be done in any form.

Accident prevention

The machine is designed for accidents to be impossible if used correctly. The operator is to be notified of the risk of injury from hot machine parts and the high pressure water jet. The "Guidelines for Liquid Spray Devices" must be complied with. (see page 12 and 13)

Check the oil level at the oil sight glass prior to each use.
(Ensure horizontal position!) The oil level should be at the middle of the sight glass. With high atmospheric humidity and temperature fluctuation there may be condensation (oil has a greyish colour); Then the oil must be changed.

Oil change for high-pressure pump B170 T / B200 T

First oil change after approx 50 hours of operation. Thereafter, no more oil change is required for the lifetime of the equipment. If it becomes necessary during repairs to perform an oil change, then the oil sight glass should be opened and the oil emptied into a container. The oil must be caught in a container and disposed of in a responsible, legal manner.

New oil: 0,7 l - Motor oil W 15/40

Oil change for high-pressure pump B230 T / B240 T / B270 T

The oil of your high pressure pump should be changed after approx. 40 hours of operation, or no later than when it takes an a grey or whitish colour. Open the oilplug over a container and drain off all the oil. The oil must be caught in a contianer and disposed of in a responsible, legal manner.

New oil: 1,0 l - Castrol Formula RS

Oil leak

In the event of an oil leak contact customer service (dealer) immediately. (damage to environment or transmission)

Guarantee

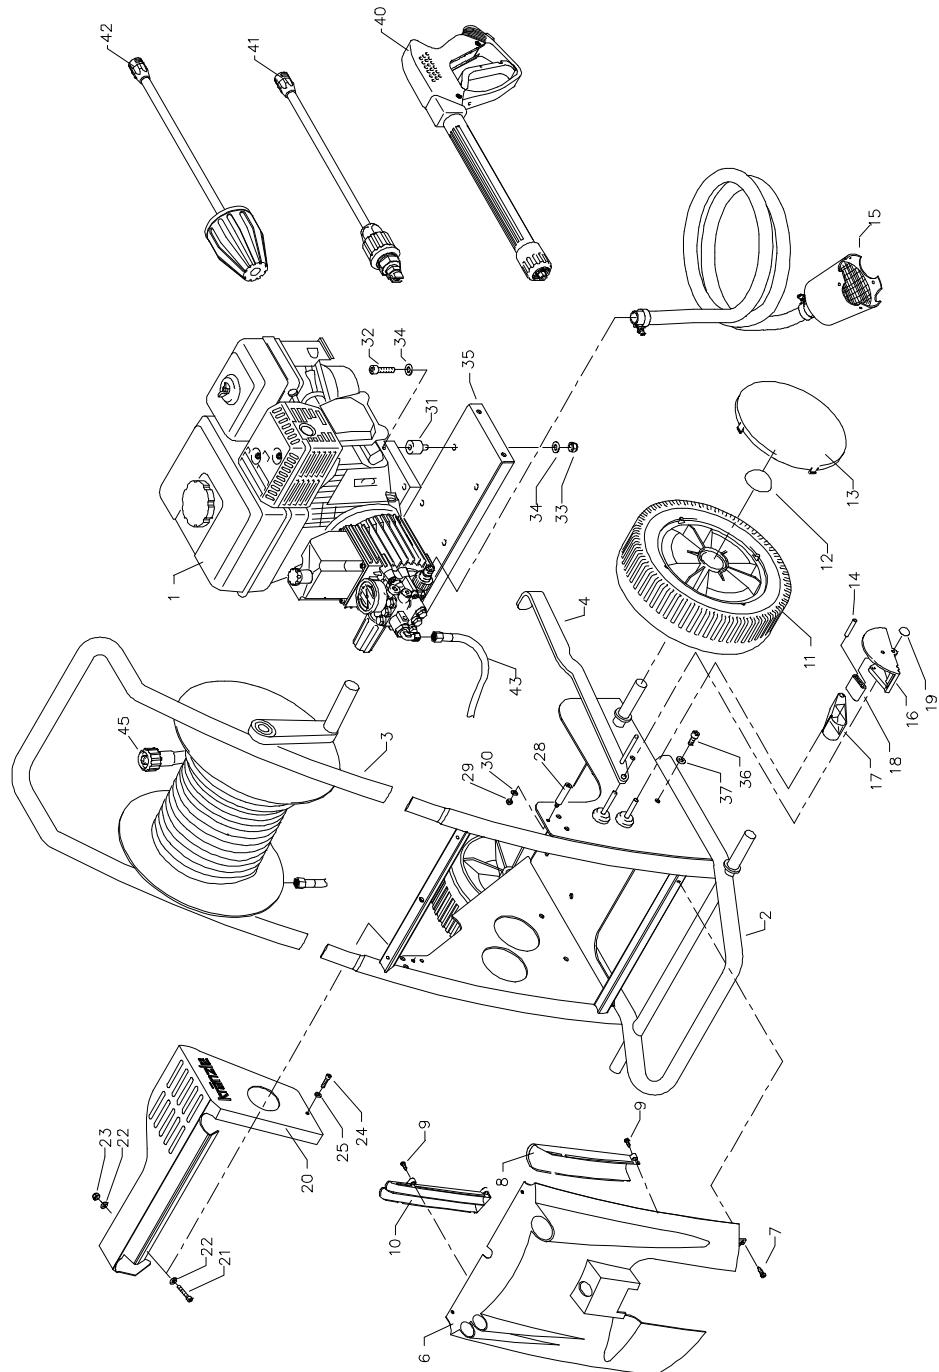

The guarantee period is 12 months according to VDMA.

The guarantee is void if changes are made to the safety devices or if the machine is used at excess temperatures or speeds. The guarantee is also void if the machine is used with less than the required amount of water, with dirty water and in case of external damage to the pressure gauge, nozzle, high pressure hose or spray device.

This guarantee is not applicable to spare parts.

Our operating instructions must be complied with.

Inspection report

for KRÄNZLE - High Pressure Cleaners

Regular inspection every 12 months if used professionally!

Appliance No:

Type:

The following must be checked:

1. Safety features

- a) Manometer
- b) Safety valve (pressure control)
- c) Operating pressure
- d) Cut out pressure (max. 10% above operating pressure)
- e) Low pressure with trigger released

2. General condition

- a) High pressure hose
- b) Spray gun
- c) Motor
- d) Oil level

The information in the operating instructions are a part of the inspection

Result of inspection:	Date of inspection:	Faults rectified, Stamp and signature
		
		
		

Excerpt from the Guidelines for Liquid Spray Equipment (ZH 1/46) by the Central Office of the Professional Trade Association.

Inspection:

Liquid spray equipment should be inspected for safe operation by a qualified person whenever necessary, but no less than every 12 months. The maker's or supplier's instructions must be followed. The inspection intervals may be extended if the equipment is not in active use.

In Germany, inspections compliant with the (German) Emission Controls Act may be required for oil and gas-fired equipment, and the owner must arrange for these to be carried out independently of the main inspection.

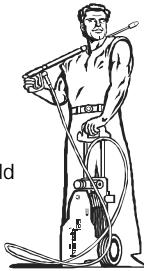

The results of inspections must be recorded in writing and presented to the respective authorities on demand. There is no set form for these records.
